Address

Qazi Town near masjid usman e ghani ,Pathan Market ,Multan

Education

Session
2020-2024

Degree
BS-bioinformatics

University
Virtual university of Pakistan

Skills

- HTML
- CSS
- Python
- Tkinter
- Django
- SQLite3

Languages

English

Urdu

Experience

- Internee

Certificates

- **Programming for Everybody (Getting Started with Python) course authorized by University of Michigan and through Coursera**
- **Python Programming - ACE College Multan**

Projects

Student-Management-System

This type of project is commonly used by schools, colleges, or educational institutions to streamline the management of student-related data, making it easier to keep track of attendance, grades, and other essential information. It combines the power of Python for data processing with a user-friendly interface created using Tkinter for a seamless user experience and a database connection for records management .

Inventory-Management-System

This Inventory Management System streamlines business operations by keeping track of product availability, sales, and restocking. Admins can efficiently manage inventory, while users can easily place orders and track their purchases. The Python backend handles data processing, and Tkinter provides a user-friendly interface for both administrators and regular users.

Text-To-Speech Editor

This Text-to-Speech Editor is a convenient tool for users who need spoken audio versions of text content. Django handles the web application's functionality,Some libraries like gTTS AND PyDub also used. HTML and CSS create the user interface, and a Python backend manages the text-to-speech conversion and audio file generation. Users can input text, select language preferences, and generate spoken audio with ease through their web browsers.
